

Managed Patching and Software Updates

Get peace of mind with reliable, secure, and transparent patch management and software updates. Think|Stack, provides credit unions with IT managed services including security patches and software updates, so you can focus your time on your core business that provides value to your members. Think|Stack's patching and software update services seamlessly update your computer assets, including software your organization relies on every day for secure computing. You operate your business without interruption and receive reliability and security of constant monitoring and management.

Key Benefits

1. Security - Your credit union's computers receive seamless updates, an essential component for a secure computing environment.
2. Your employees are more productive with optimized computers receiving the latest software fixes and improvements.
3. Your employees access the latest software features and capabilities with regular software updates.
4. Patching and software updates ensures compliance with best practices and regulations and reduces risk.
5. Our solution is a great alternative to, and replacement for, standard Windows Server Update Services (WSUS).
